

## SAMPLE CYLINDER HEATED ENCLOSURE - SCHE

Model HE-6.

Holds 6x sample cylinders includes pressure regulation and uses IECEX Exd certified components.

### ABOUT US

Since 1990, Haldatec has been providing products and services to the Oil, Gas and related industries in Australia, Pakistan, Singapore, Papua New Guinea, India and New Zealand.

### ENPRO

Our house product label, EnPro, has been developed to complement our core business and has been driven by customer needs. Our comprehensive range includes innovative designs, adaptations and applications introduced to solve problems for our customers.

### STANDARDS

To ensure we provide the best possible support for our customers and suppliers, we have certification to ISO9001:2015.

The EnPro Sample Cylinder Heated Enclosure series (SCHE) is designed to provide stable and controllable heating of sample cylinders prior to analysis.

Designed for sample pre-treatment of ASTM D1945 natural gas analysis samples, the SCHE series can also be used for any analysis where a stable, elevated temperature is required.

Fitted with an adjustable thermostat, temperatures are able to be maintained up to +120°C. Control temperature accuracy to +/-5°C of set-point with an electromechanical controller, or +/-1°C with a digital controller.

### DESIGN FLEXIBILITY

The enclosure can be custom designed and constructed to suit customer requirements/specifications. A design to meet specific needs can be provided.

Users can specify a range of available options. This can include the size and quantity of cylinders to be heated, the materials of construction and the required temperature to be maintained.

Sample pressure regulation can be included with the regulator being maintained at the enclosure set temperature, or having an internal heater to help overcome any J-T cooling effect.

It is available with either standard, non-hazardous area electrical components or IECEX Exd certified electrical components for use on hydrocarbon service or in hazardous areas.

### MATERIALS

The enclosure is made with a stainless steel outer enclosure and with either aluminium or stainless steel internals. All wetted parts are 316SS.

Exotic materials and finishes are also available for wetted components such as Duplex, Super Duplex, Silconert etc.
